Skin your PDA

Is your PDA looking a little bland? You can add a little personality to your PDA with a new "skin" from [SkinIt.com](#). According to Skin It's Press Release:

Individuals can personalize all of their mobile devices, selecting from hundreds of cell phone models, iPod models, laptops, PDA's and gaming devices available on the SkinIt Web site. The skin itself is made from a professional-grade vinyl, which is printed one at a time through a six-color process that ensures detailed and premium images. The vinyl skin is then coated with a scratchproof finish and custom cut, which creates a perfect fit for each device that can last for years.

Each SkinIt skin is easy to apply and has a protective element, providing devices another layer of safety from scratches and other damage. The skin can be easily removed, allowing users to personalize their devices as often as they choose, without damaging the device.

Sounds pretty interesting. We'll try the Skin It service out and let you know what we think.
